

Why does your clinic use CareWay?

Your professional spends up to 20 hours a week on paperwork, which can lead to longer wait times for appointments.

CareWay is an innovative technology that captures key information from your consultations while ensuring your personal information remains private. Think of it as a digital assistant, seamlessly handling documentation, so your professional can focus on what truly matters: YOU!

What does this mean for you?

More personalized care

Your professional can now fully engage with you, focusing on your needs rather than a screen.

Less burnout, better care

Administrative tasks are one of the biggest causes of burnout. By reducing paperwork, CareWay allows professionals to spend more time doing what they love—caring for you.

Shorter wait times

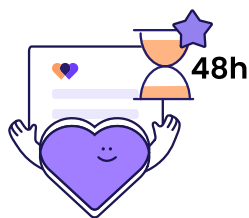

With documentation handled in real time, your professional spends less time on paperwork after appointments, helping them stay on schedule and see more patients sooner.

How does it work?

Recording the consultation

The meeting will be temporarily recorded so that CareWay can work their magic — just like having a digital assistant to handle the paperwork.

Automatic deletion after 48h

Professionals have up to 48 hours to finalize their notes. To support them without adding stress, CareWay securely retains the recording within this timeframe —then deletes it permanently.

100% secure & Canada-based

All data is encrypted, stored exclusively on Canadian servers, and never includes personal patient data. CareWay adheres to all security standards established by the strictest government entities, ensuring confidentiality and data integrity.
